SUPPLEMENTAL DATA

NAME Lake Anna (2)

LOCATION _____

Additional Data

Scribbly Sitka Spruce and occasional Western Alder grow close to shore with a narrow beach fringe of sedges extending into the lake. Lake shallows in southeast arm of lake exhibit dead branches and a deep blanket of detritus covers the bottom.

Tributary 1 enters the lake from the North. It provides large stretches of suitable gravel areas for spawning. Abundant pools along the stream bank provide suitable rearing areas.

Area around the falls has abundant bear sign presumably after spawning season. About 50 yards downstream from the falls a small school of 12 sockeye, 4 pinkie, and 2 chum (numbers are approximated) were resting. Dolly Varden and cutthroat were also observed swimming among the mature salmon.

Variable mesh gillnet was set in the southeast arm. Net was pulled due to an entangled female sockeye. Just missed a male sockeye and gilled a cutthroat as net was pulled and sacked.

Water table in the area is high and suitable areas for camp are located near the tributary stream or near the gravel beach on the North shore of Lake Anna. Abundant bear trails make passage into the southeast arm of the lake, however, watchful eye is advised for bear active in the area.

SUPPLEMENTAL DATA

NAME Annita Lake

LOCATION _____

Recreational Analysis

Accessibility:

The Annita Lake area is accessible by large boat although numerous offshore rocky reefs make the outside area restrictive and dangerous in rough weather. Suitable anchorage is located in Lake Anna for large boat although exposed to offshore winds.

Annita Lake is accessible by aircraft, which can land in the lake. Suitable takeoff and landing space for float planes but too short takeoff roll for a loaded beaver aircraft.

Fishability:

The lake is difficult to fish from the banks due to dense alders and spruce. Suitable bank area from the major tributary for casting. The lake overall is very deep and an inflatable boat or canoe is recommended to facilitate movement on the lake.

Esthetics:

Annita Lake is the collecting basin of a large muskeg system. The surrounding terrestrial ecosystem is a somewhat characteristic muskeg valley system.

Proximity to Other Recreational areas:

Annita Lake is located close to Ford Arm Lake to the south and the Klag Bay Lakes to the north. At present it is only used on occasion by real adventuresome anglers.
